**Diplomate Chiropractic Board of Clinical Nutrition**

**5yr/old: he hasn't needed the inhaler in the 7 months since he has been on the vitamin and dietary program**

Patient LK -

5 year old Caucasian male presents for consultation on severe breathing issues that prevent him from enjoying time outside with friends, family and neighbors. He also has a variety of food allergies that seem to cause eczema patches on the backs of his arms and trunk.

- He was highly motivated to get better so he could start participating in outdoor "PLAY"
- At 5 years old he didn't need to be prompted to take his vitamins with meals each day for 6 months on the program
- Through 8 months; blood showed near optimal levels of Vitamin D3, reduced inflammation within liver and pancreas as well as improved digestion
- His father reports to me that he can now go outside and play with his brothers without having to use his inhaler; in fact, he hasn't needed the inhaler in the 7 months he has been on the vitamin and dietary program
- No seasonal allergy issues; skin is clearing up (eczema was a problem previously)
- **Off of the following meds: Albuterol, Singulair, Claritin and Zyrtec**
